

Stock Price Tracker App

This app has two modules, Service and Client. Service module act as publisher and publish the event whenever the stock Price changed, and Client module subscribe to the event published by the Service module.

To simulate these module, in the Program.cs, I have subscribed for 2 stocks {Stock1, Stock2}. And unsubscribing them after some second to simulate both subscribe and unsubscribe.

Here's the output when run this application.

```
Microsoft Visual Studio Debug Console
Stock price changed, Stock price of Stock1 is 250.0111680291645 at 2019-11-11 12:51:25 AM sec
Stock price changed, Stock price of Stock2 is 195.42519958011115 at 2019-11-11 12:51:25 AM sec
Stock price changed, Stock price of Stock2 is 192.93403790003342 at 2019-11-11 12:51:26 AM sec
Stock price changed, Stock price of Stock1 is 248.00480548665152 at 2019-11-11 12:51:26 AM sec
Unsubscribing for Stock1
Stock price changed, Stock price of Stock2 is 183.7214755470499 at 2019-11-11 12:51:28 AM sec
Stock price changed, Stock price of Stock2 is 181.95947358941635 at 2019-11-11 12:51:29 AM sec
Unsubscribing for Stock2
